Kronos-mini-Proxy: actual frozen-weight inference on NON-OHLCVA data
Per-feature numeric proxies | Deterministic label-free subsampling | Not native financial K-lines

Dataset	Dimensions	Calibration	Test	Known	Positive	Precision	Recall	F1	AP	AlarmRate

Dimensions = calibrated / inferred features. Known = test points with labels 0 or 1.
Recall/F1/AP are shown as N/A for subsets with no positives. Each feature has its own POT threshold.
